

Livestock T7E Sheep Scale

The Micro T7E Sheep/Pig Digital Weigher is engineered specifically for the challenges of weighing small livestock on the farm. It features a heavy-duty, powder-coated mild steel cage that is built to withstand the rigorous demands of daily agricultural use and ensure the longevity of your investment.

Its robust construction provides a safe, contained environment for accurately weighing sheep and pigs without unnecessary wear and tear.

Efficiency in handling is paramount in livestock management. To streamline your workflow, the cage is designed with four separate sliding doors. This configuration allows for quick and controlled entry, exit, and effective sorting or grading of your animals, minimizing stress and maximizing the speed of your operation. The high-visibility, 51mm bright red LED display ensures you can read the weight instantly from a distance.

Power flexibility ensures continuous operation across your farm. The scale is equipped with a built-in rechargeable battery, allowing for portable use in different pens or fields. It can also be powered directly via mains power.

The dependable power source and durable design make the Micro T7E an indispensable tool for accurate record-keeping and enhancing the profitability of your sheep and pig operation.

The scale offers precise capacity options to match your needs: either 600kg×200g or 1000kg×500g. This level of graduations provides the accurate data required for optimizing feed conversion ratios and achieving target weights. The indicator also includes useful functions like Tare, Zero, Accumulation, and an RS-232 output for easy connectivity to external devices like printers.
