

The Micro Coin Sorter

The Real Change Maker

Streamline your daily cash-up with the Micro Coin Sorter / Counter — the compact, efficient solution designed to eliminate the stress of manual coin counting. This intelligent unit automatically sorts and counts mixed South African coins, giving you instant accuracy and reducing the time spent reconciling tills at the end of the day.

Built for retail, hospitality, small businesses, and cash offices, this machine turns messy loose change into organised, easy-to-read results. Simply pour your coins into the hopper, and the sorter separates each denomination while calculating the total Rand value, providing a clear breakdown to support accurate record-keeping.

Despite its compact footprint, the Micro Coin Sorter / Counter delivers impressive performance with a counting speed of up to 200 coins per minute. The 7-digit LED display ensures excellent visibility, making it quick and effortless for staff to verify counts, even in fast-paced environments or low-light areas behind the counter.

Reliable, accurate, and purpose-built for South African currency, the Micro Coin Sorter / Counter is the smart upgrade for any business looking to improve efficiency. It reduces human error, speeds up cash handling, and frees your staff to focus on customer service rather than tedious manual tasks.

With three user-friendly counting modes — free count, batch count, and fixed count — the micro sorter adapts to your workflow without complication. Whether you're preparing bank deposits, balancing tills, or organising float money, the machine gives you total flexibility, supported by a convenient halt function for mid-count adjustments.
