TW-3 Weigh Scale

Simple to operate, touch screen weigh scale and data collector
Record and analyse life data to optimise animal performance

Market leading touch screen technology - Full colour, outdoor readable touch screen.

On board help, 24/7 - The entire product manual is loaded into the product. Help is only one click away.

Record treatments on the spot - Animals can be weighed and administered the correct dose rate, all recorded on the weigh scale at the time of treatment.

Animal notes and note alerts - Record notes against animals on the spot for later review. Notes alert the operator when the animal's tag is read.

Animal data analysis on device - Shows individual weight gain graphs, as well as weight distribution plots for all animals within a weighing session.

Record life data and traits - Ideally suited to farmers wanting to record and review more information than simply weight on their animals. Can record up to 3 traits per session.

Ultimate user experience - Execution of common tasks have been rigorously tested to ensure that we are able to deliver the most farmer friendly experience on the market.

Draft up to 9 groups by weight, weight gain, predetermined EID list or by recorded life data and traits.

Tough, rugged exterior - Farm ready, tough design.

Flexible connectivity options - Whether connecting to drafters or readers via a serial cable, to a PC via USB or utilising the Bluetooth and WiFi wireless options, the TW-1 has every option available.

Flexible mounting options - Easy to use sitting flat, or mounted to a vertical surface. The adjustable mounting bracket allows you to easily tailor the viewing angle for optimum visibility.

The complete package, ready to go - Just plug into your existing load bars and you have everything you need to start weighing:

- Tough and convenient Gallagher carry case
- Mounting bracket
- Micro-fibre screen cloth
- Battery charging cable
- Mains charging cable
- USB drive loaded with APS software
- USB cable for data transfer to PC
